Suite 302, 77 Parramatta Road

Silverwater NSW 2128 Australia

Tel: +61 2 8719 8988 Fax: +61 2 8719 8977

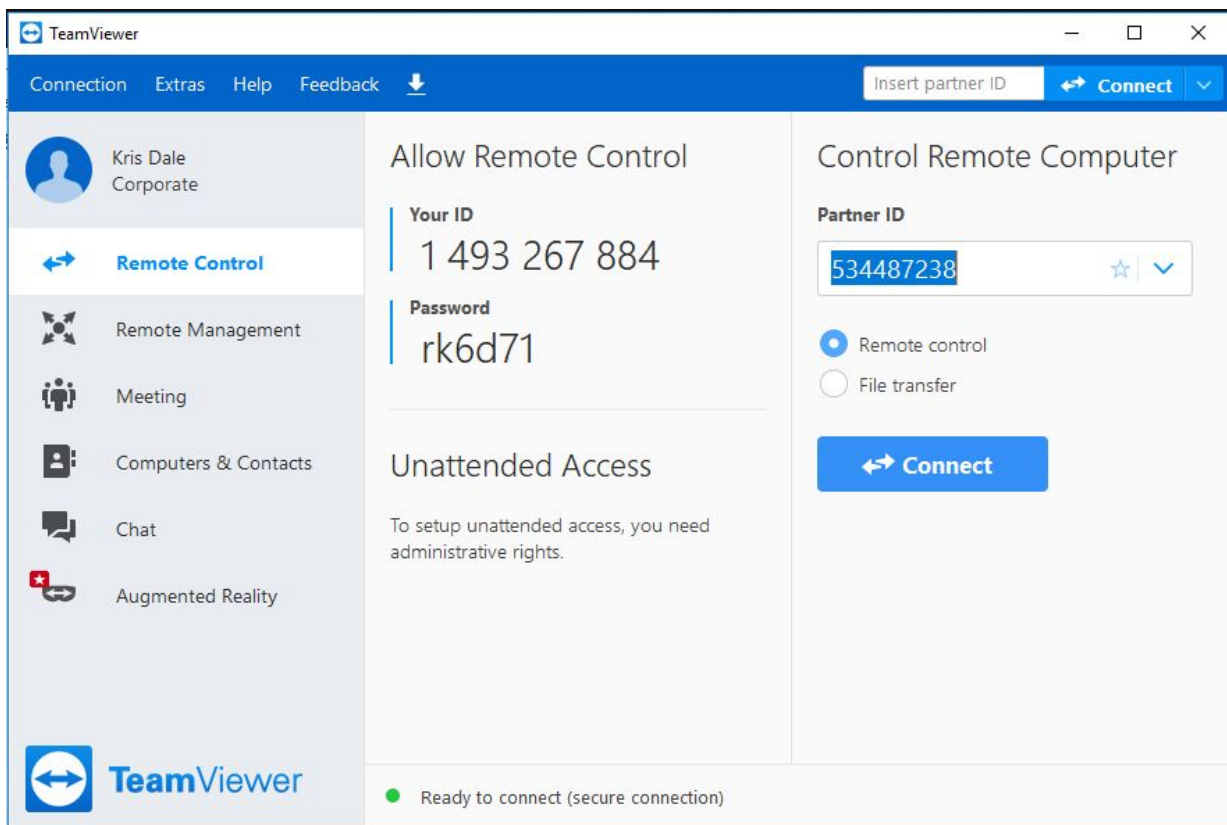

How to Remotely access your Sunix Application in the Practice from your Home

1. Set up the computer offsite, install a remote application (Teamviewer and Anydesk are both used by Sunix), make sure that the charger is connected (for laptops).
2. Use a wired connection to have a stable internet connection.
3. Install the same remote application on the computer onsite, make sure to get the credentials needed to do a remote session.

Note:

Once the remote session is set up, do not shut down/restart/log off the computer offsite, it will disconnect the current remote access.

For Teamviewer, you will need the username and password. These are automatically generated by the Teamviewer application, as shown below:

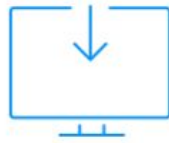

For Teamviewer, the remote access can be set up by following the steps below:
Installer can be downloaded on this [link](#).

How to connect with TeamViewer

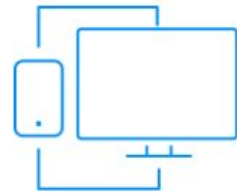

Step 1

Download and install TeamViewer
on the device you want to start a connection from, like a desktop or mobile device.

Step 2

Install TeamViewer on the target device you want to access. This could be another desktop or mobile device, or even a point of sale system, kiosk, or IoT device.

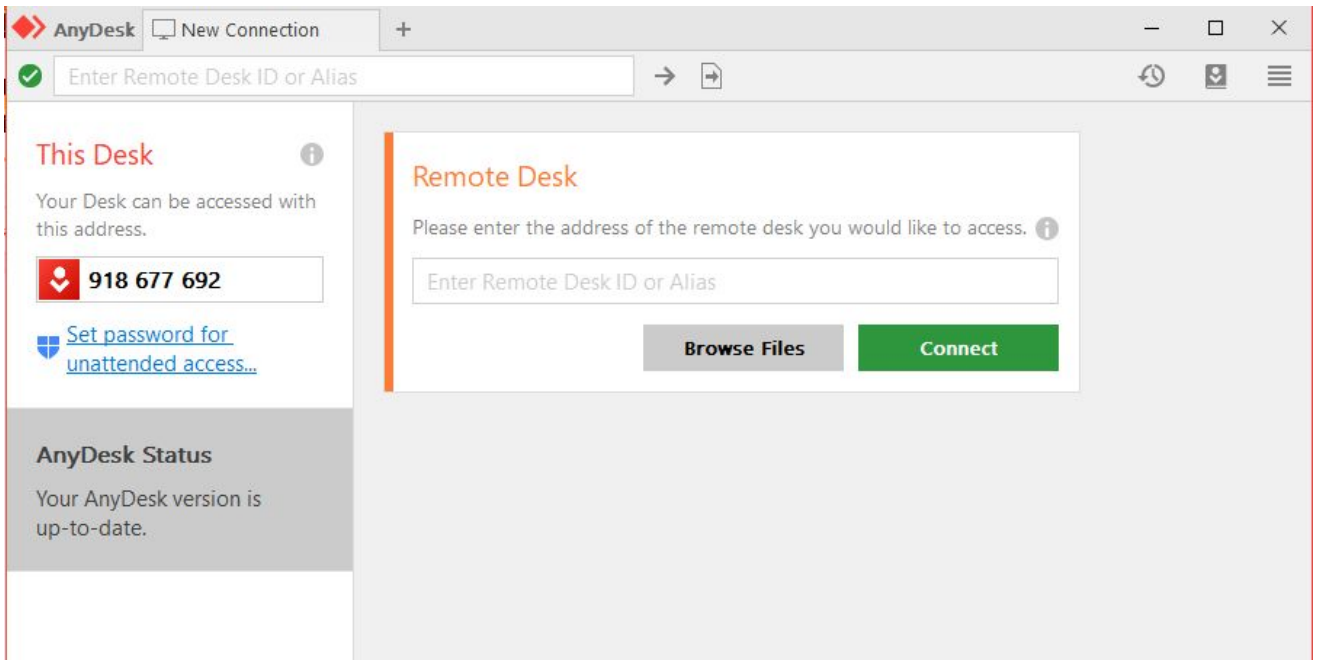

Step 3

Enter your connection partner's ID and password on the outgoing device, connect in real time, and control the target device as if you were there in person.

Visit the [TeamViewer website](#) for more information.

For Anydesk, the remote access can be set up by following the steps below:

1. Download the application [installer](#).

2. Enter the number or Alias to connect to the other computer.

Visit this [link](#) for detailed set up and features of Anydesk.

Visit [Anydesk](#) website for more information.
